15 Best Neural Network Courses [Bestseller & FREE 2026]

Deep Learning / By Aqsa Zafar / April 12, 2026

Are you looking for the **Best Neural Network Courses?...** If yes, you are in the right place. In this article, I have listed the **15 Best Neural Network**

Courses & Certifications.

So, give a few minutes and find the **Best Neural Network Courses**. You can bookmark this article so that you can refer to this article later.

Now without any further ado, let's get started-

Best Neural Network Courses

Table Of Contents

- 1. Neural Networks and Deep Learning
- 2. Deep Learning– Udacity
- 3. Deep Learning A-Z™: Hands-On Artificial Neural Networks– Udemy
- 4. Intro to Deep Learning with PyTorch– Udacity FREE Courses
- 5. Introduction to Deep Learning & Neural Networks with Keras– Coursera
- 6. Deep Neural Networks with PyTorch– Coursera
- 7. Intro to TensorFlow for Deep Learning– Udacity FREE Course
- 8. Introduction to Deep Learning-edX
- 9. Deep Learning in Python– Datacamp
- 10. Deep Learning: Convolutional Neural Networks in Python– Udemy
- 11. Convolutional Neural Networks- Coursera
- 12. Complete Guide to TensorFlow for Deep Learning with Python– Udemy
- 13. Deep Learning with Python and PyTorch- edX
- 14. Introduction to Deep Learning- Coursera
- 15. Introduction to Deep Learning with PyTorch– DataCamp
- FAQ

1. Neural Networks and Deep Learning

Provider- deeplearning.ai

Instructor- Andrew Ng, Younes Bensouda Mourri, Kian Katanforoosh

Rating- 4.9/5

Time to Complete- 20 hours

This course is the part of **Deep Learning Specialization** program. And I think this is the best course to begin your deep learning journey.

In this course, you will understand the major technology trends driving Deep Learning, key parameters in a neural network's architecture, how to **build, train, and apply fully connected deep neural networks**, etc.

Extra Benefits-

- You will get a **Shareable Certificate**.
- Along with that, you will get **Course Videos & Readings, Practice Quizzes, Graded Assignments with Peer Feedback, Graded Quizzes with Feedback, and Graded Programming Assignments.**

Who Should Enroll?

- Those who have a **basic understanding of machine learning.**

Interested to Enroll?

If yes, you can enroll here-> Neural Networks and Deep Learning

2. Deep Learning– Udacity

Rating- 4.7/5

Time to Complete- 4 months (If you spend 12 hours per week)

This Nano-Degree program from Udacity will give you a complete understanding of Deep Learning. In this program, you will build **convolutional networks for image recognition, recurrent networks for sequence generation, generative adversarial networks for image generation**.

You will also learn how to implement **gradient descent** and **backpropagation** using **NumPy matrix multiplication**, how to prevent **overfitting of training data** and **minimize the error of a network**, how to define and **train neural networks for sentiment analysis**, etc.

This Nanodegree program will also teach you how to use **Amazon's GPUs** to train neural networks faster. The instructor **Sebastian Thrun** will explain about **detecting skin cancer with CNN.** There are 5 courses in this Nanodegree program. Now let's see the details of the courses-

Courses Include-

1. Neural Networks
2. Convolutional Neural Networks
3. Recurrent Neural Networks
4. Generative Adversarial Networks
5. Updating a Model

Extra Benefits-

- You will get a chance to work on **Real-world projects.**
- You will get **Technical mentor support.**
- Along with that, you will get **Resume services, GitHub review, and LinkedIn profile review.**

Who Should Enroll?

- Those who have **intermediate-level Python programming knowledge** and experience with **NumPy and pandas**.
- And those who have **math knowledge, including- algebra and some calculus**.

Interested to Enroll?

> If yes, then check it out **here**– Deep Learning (Udacity)

3. Deep Learning A-Z™: Hands-On Artificial Neural Networks– Udemy

Rating- 4.5/5

Time to Complete- 22.5 hours

This is another best courses to learn deep learning. In this course, you will learn **Artificial neural networks, convolutional neural networks, recurrent neural networks, self-organizing maps, Boltzmann machines, AutoEncoders, and the basics of regression and classification.**

Throughout this course, you will work on **Real-World datasets**, to solve **6** Real-World business problems- **Customer Churn problem**, **Image Recognition**, **Stock Price Prediction**, **Fraud Detection**, and **Recommender Systems**. The instructor of this course, **Kirill** is an amazing instructor and explains each topic very clearly.

Extra Benefits-

- You will get a **Certificate of Completion.**
- You will also get 37 articles and 5 downloadable resources.
- Along with that, you will get lifetime access to the course material.

Who Should Enroll?

- Those who have **basic Python programming knowledge** and **High school mathematics.**

Interested to Enroll?

If yes, then check it out **here**– Deep Learning A-Z™: Hands-On Artificial Neural Networks

4. Intro to Deep Learning with PyTorch– Udacity FREE Courses

Time to Complete- 2 Months

Rating- NA

This is a **free deep-learning online course.** In this course, there are 9 lessons. The course begins with the **neural network and PyTorch basics.**

After that, you will learn convolutional neural network basics such as **Applications of CNNs**, **Loss & Optimization**, **Defining a Network in PyTorch**, **Training the Network**, **Convolutional Layer**, **etc.**

Next, you will learn the Recurrent Neural Networks and the **Basics of LSTM**. At the end of this course, you will **build a model** that can read some text and **make a prediction** about the sentiment of that text, whether it is **positive or negative using RNN.**

Overall, this course is a **very in-depth course to learn deep learning using PyTorch**. The course doesn't cover only theory, which is the best

part of this course. There are **various quizzes and exercises** in this course.

Who Should Enroll?

- Those who are comfortable with **Python** and data processing libraries such as **NumPy and Matplotlib**.

Interested to Enroll?

> If yes, then start learning- Intro to Deep Learning with PyTorch

5. Introduction to Deep Learning & Neural Networks with Keras– Coursera

Rating- 4.7/5

Provider- IBM

Time to Complete- 8 hours

This course is **best for beginners** who are planning to start their careers in deep learning. In this course, you will learn the **basics of deep learning** and get to know about **deep learning and artificial neural networks.**

This course will teach you how to build your **first deep-learning model with the Keras library**. If you are an absolute beginner, then you should begin your deep learning journey with this course.

Now, let's see the syllabus of the course-

Syllabus of the Course-

- Introduction to Neural Networks and Deep Learning
- Artificial Neural Networks
- Keras and Deep Learning Libraries
- Deep Learning Models
- Course Project

Extra Benefits-

- You will get **Course Certificates** upon completion.
- Along with this, you will get **Course Videos & Readings, Practice Quizzes, Graded Assignments with Peer Feedback, Graded Quizzes with Feedback, and Graded Programming Assignments.**

Who Should Enroll?

- Those who are absolute beginners in deep learning.

Interested to Enroll?

> If yes, then start learning- Introduction to Deep Learning & Neural Networks with Keras

6. Deep Neural Networks with PyTorch– Coursera

Rating- 4.4/5

Provider- IBM

Time to Complete- 31 hours

This is a very informative course offered by IBM. In this course, you will learn how to build deep learning models by using PyTorch. This course contains a **lot of content** that is **simple and easy to understand.**

At the beginning of the course, you will learn **Pytorch's tensors** and **Automatic differentiation package.** As the course move, you will learn fundamentals of deep learning with PyTorch such as **Linear Regression, logistic regression, Feedforward deep neural networks, different activation function roles, normalization, dropout layers, convolutional Neural Networks, Transfer learning, etc.**

In short, this is the best course for those who want to learn PyTorch for deep learning. Now let's see the syllabus of the course-

Syllabus of the Course-

- Tensor and Datasets
- Linear Regression
- Linear Regression PyTorch Way

- Multiple Input Output Linear Regression
- Logistic Regression for Classification
- Softmax Rergresstion
- Shallow Neural Networks
- Deep Networks
- Convolutional Neural Network
- Peer Review

Extra Benefits-

1. You will get a **Shareable Certificate** upon completion.
2. Along with this, you will get **Course Videos & Readings, Practice Quizzes, Graded Assignments with Peer Feedback, Graded Quizzes with Feedback, and Graded Programming Assignments.**

Who Should Enroll?

- Those who have **previous knowledge of Python and machine learning.**

Interested to Enroll?

> If yes, then check out all details here- Deep Neural Networks with PyTorch

7. Intro to TensorFlow for Deep Learning– Udacity FREE Course

Time to Complete- 2 months

Rating- NA

In this course, first, you will learn **machine learning basics.** After that, you will be introduced to the **Fashion MNIST dataset** and **understand the neural network.**

This course will also cover **convolutional neural networks** in detail. Next, you will learn **transfer learning, time-series forecasting, NLP, and TensorFlow Lite.** You will also learn **how to use TensorFlow lite** to build machine learning apps on Android, iOS, and IoT devices.

Who Should Enroll?

- Those who know Python programming and basic algebra.

Interested to Enroll?

> If yes, then start learning- Intro to TensorFlow for Deep Learning

8. Introduction to Deep Learning-edX

Time to Complete- 16 weeks

Rating- NA

The **course material this course is freely available**, but for a certificate, you have to pay. Which I think is not required. In this course, you will learn the **fundamental concepts of deep learning.**

You will learn the **types of neural networks, Convolutional Neural Networks (CNN), Recurrent Neural Networks, Bias, and Discrimination in Machine Learning.**

Overall, this is not a very detailed course but **good for understanding the basics of deep learning.**

Who Should Enroll?

- Those who have programming knowledge and mathematics (linear algebra, statistics) knowledge.

Interested to Enroll?

> If yes, then start learning- Introduction to Deep Learning

9. Deep Learning in Python– Datacamp

Time to Complete- 20 hours

Type- Skill Track

This is a skill track offered by **Datacamp.** In this skill track, there are 5 courses. In these 5 courses, you will learn **the fundamentals of neural networks**, and **how to use deep learning with Keras 2.0**, **TensorFlow 2.4**, and **PyTorch**.

You will also learn about **convolutional neural networks** and how to use them to build much more powerful models which give **more accurate results.** Throughout these courses, you will learn how to accurately **predict housing prices, credit card borrower defaults, and images of sign language gestures.**

In the last course, you will learn some **advanced topics** such as **category embeddings and multiple-output networks.**

Who Should Enroll?

- Those who have previous knowledge in **Machine Learning and Python Programming.**

Interested to Enroll?

> If yes, then check it out **here**– Deep Learning in Python

10. Deep Learning: Convolutional Neural Networks in Python– Udemy

Rating- 4.7/5

Time to Complete- 12 hours

This course is focused on **Convolutional Neural networks (CNN)**, a powerful algorithm of **Deep Learning**. In this course, you will learn the **fundamentals of CNN** and how to **build a CNN using Tensorflow 2.**

This course will also teach how to do **image classification in Tensorflow 2** and how to use **Embeddings in Tensorflow 2 for NLP**.

Throughout this course, you will work in **Numpy, Matplotlib**, and Tensorflow libraries. This course is based on a **practical approach.**

Extra Benefits-

- You will get a **Certificate of Completion.**
- Along with that, you will get lifetime access to the course material.

Who Should Enroll?

- Those who have an understanding of b**asic math (taking derivatives, matrix arithmetic, probability).**

Interested to Enroll?

> If yes, then check it out **here**– Deep Learning: Convolutional Neural Networks in Python

11. Convolutional Neural Networks– Coursera

Rating- 4.9/5

Provider- deeplearning.ai

Time to Complete- 20 hours

This course will teach you the key **features and concepts** that are required to build CNN(convolutional neural network). In this course, you will learn how to apply convolutional networks to visual detection and recognition tasks.

This course is combined with **small assessments or questions** which makes it **easier to follow** along. In a nutshell, this course is best to start out in the world of CNN.

Now, let's see the syllabus of the course-

Syllabus of the Course-

- **Foundations of Convolutional Neural Networks**
- **Deep convolutional models: case studies**
- **Object detection**
- **Special applications: Face recognition & Neural style transfer**

Extra Benefits-

- You will get **Course Certificates** upon completion.

- Along with that, you will get **Course Videos & Readings, Practice Quizzes, Graded Assignments with Peer Feedback, Graded Quizzes with Feedback, and Graded Programming Assignments.**

Who Should Enroll?

- Those who have some prior knowledge in **Python and Machine Learning.**

Interested to Enroll?

> If yes, then check out all details here- Convolutional Neural Networks

12. Complete Guide to TensorFlow for Deep Learning with Python– Udemy

Rating- 4.5/5

Time to Complete- 14 hours

In this course, you will learn how to use **Google's TensorFlow framework** to create **artificial neural networks for deep learning**. This course will also provide complete **Jupyter Notebook guides of code**.

Throughout this course, you will learn **neural network and TensorFlow basics, convolutional neural network, recurrent neural network,**

reinforcement Learning, AutoEncoders, etc. But the **drawback** of this course is that they use **Tensorflow 1.**

Extra Benefits-

- You will get a **Certificate of Completion.**
- You will also get 7 articles and 5 downloadable resources.
- Along with that, you will get lifetime access to the course material.

Who Should Enroll?

- Those who have some knowledge of **Python programming and basic knowledge of math (mean, standard deviation, etc).**

Interested to Enroll?

> If yes, then check it out **here**– Complete Guide to TensorFlow for Deep Learning with Python

13. Deep Learning with Python and PyTorch– edX

Provider- IBM

Time to Complete- 6 Weeks

After gaining PyTorch basics from PyTorch Basics for Machine Learning course, this course will teach you how to build **deep neural**

networks in PyTorch. And how to apply methods such as **dropout, initialization, different types of optimizers, and batch normalization.**

Then you will learn **Convolutional Neural Networks, how to train the model on a GPU, Transfer Learning, dimensionality reduction techniques, and autoencoders.** Throughout this course, you will learn from expert **instructors of IBM**.

Extra Benefits-

- You will get a **Certificate of completion.**

Who Should Enroll?

- Those who have **previous knowledge in Python Programming** and familiar with **machine learning concepts.**

Interested to Enroll?

> If yes, then check out the program details here- **Deep Learning with Python and PyTorch**

14. Introduction to Deep Learning– Coursera

Provider- National Research University Higher School of Economics

Rating- 4.6/5

Time to Complete- 34 hours

This course is the part of **Advanced Machine Learning Specialization** program. In this course, you will learn the fundamentals of **modern neural networks** and their **applications in computer vision** and **natural language understanding.**

This course will teach you all the important **building blocks of neural networks** including **fully connected layers, convolutional and recurrent layers.**

There is a project associated with this course, where you will implement a **deep neural network** for **image captioning** which solves the problem of giving a text description for an input image.

Extra Benefits-

- You will get a **Shareable Certificate**.
- Along with that, you will get **Course Videos & Readings, Practice Quizzes, Graded Assignments with Peer Feedback, Graded Quizzes with Feedback, and Graded Programming Assignments.**

Who Should Enroll?

- Those who have **basic knowledge of Python**, linear algebra, **and probability.**

Interested to Enroll?

If yes, then check out the program details here- Introduction to Deep Learning

15. Introduction to Deep Learning with PyTorch– DataCamp

Time to Complete- 4 hours

This course will teach how you can use PyTorch to learn deep learning basics, then you will build your first neural network to predict digits from the MNIST dataset. After this, you will learn about convolutional neural networks. This course will also teach you how to use CNN to build more powerful models that give more accurate results.

The first chapter of this course is **free** so you can check the quality and content of the course. There are total **4 chapters** in this course-

1. Introduction to PyTorch (FREE)
2. Artificial Neural Networks
3. Convolutional Neural Networks (CNNs)
4. Using Convolutional Neural Networks

Who Should Enroll?

- Those who know **Python programming** and familiar with supervised learning.

Interested to Enroll?

> If yes, then check out the course details here- Introduction to Deep Learning with PyTorch

And here the list of "**Best Neural Network Courses**" ends. I hope these **Best Neural Network Courses** will definitely help you. I would suggest you bookmark this article **"Best Neural Network Courses"** for future referrals. Now it's time to wrap up.

Conclusion

In this article, I tried to cover the **15 Best Neural Network Courses**. If you have any doubts or questions regarding these **Best Neural Network Courses**, feel free to ask me in the comment section.

All the Best!

Enjoy Learning!

FAQ

- What is the best way to learn neural networks?

The best way to learn neural networks is to **combine theoretical understanding with hands-on practice.** Start by studying the **basics and the math behind neural networks.** Then, explore different types of networks and their applications. Take **online courses and utilize resources**, implement networks using popular frameworks, and stay updated with the latest research. Join communities to engage with others. With consistent effort, you'll develop a strong foundation in this exciting field of artificial intelligence.

– Which neural network is best?

There is no definitive answer to which neural network is the best because it depends on the specific task or problem you are trying to solve. Different neural network architectures excel in different domains. For example, convolutional neural networks **(CNNs) are well-suited for image processing tasks,** while **recurrent neural networks (RNNs) are effective for sequential data analysis**. It's important to choose the neural network architecture that aligns with the specific requirements of your task and experiment with different models to find the most suitable one.

– Where can I study neural networks?

You can study neural networks through online platforms like **Coursera and Udacity**, which offer dedicated courses. Deep learning frameworks like **TensorFlow and PyTorch** provide educational resources too. Books like **"Deep Learning" by Goodfellow, Bengio, and**

Courville are valuable references. Stay updated with **research papers, blogs, and conferences such as NeurIPS, ICML, and ICLR for the latest insights.**

- What is the best course for CNN?

Convolutional Neural Networks by **deeplearning.ai** is the best course. In this course, you will understand the basics of **Convolutional Neural Networks.** And learn the implementation of foundational layers of CNNs **(pooling, convolutions)**.

- What are the 3 types of learning in neural networks?

The three types of learning in neural networks are **supervised learning**, where the network learns from labeled data; **unsupervised learning**, where the network discovers patterns from unlabeled data; **and reinforcement learning**, where the network learns through interactions with an environment to maximize rewards. Each type serves different purposes and has unique applications in training neural networks.

- Is training neural networks difficult?

Training a neural network can be challenging, **especially when dealing with complex models and large datasets.** It requires a solid understanding of the underlying concepts and mathematics involved. **Designing the architecture, selecting appropriate hyperparameters, and handling issues like overfitting and optimization** can also be demanding. However, with the availability

of resources, frameworks, and online communities, along with practice and persistence, it is possible to overcome these challenges and effectively train neural networks.

- Do I need math for neural networks?

Yes, a basic understanding of math is necessary for working with neural networks. Concepts like **linear algebra, calculus, and probability theory** are important for understanding how neural networks function and how they are trained. Math knowledge helps in comprehending operations like matrix calculations, gradients, and optimization algorithms.
